### Preferred Dental Technologies Inc. Signs Letter of Intent to Adopt Blockchain Tracking Platform for 3D Printed Dental Components

Preferred Dental Technologies Inc. (CSE: PDTI, US OTC: PDTTF), is pleased to announce it has signed a Letter of Intent with Thorgrid Corp., the developer of the 'Provenance X' software platform to explore and implement applications based on this blockchain based system.

PDTI has developed a patented series of innovative dental abutment components for use with the EAS Series. The company was interviewed on the technology by the leading industry analysis firm for the 3D printing industry, SmarTech Publishing for their report, *3D Printing in Dentistry 2018*. (For details on how to access the full research report, visit [SmarTech Publishing's website](#)). These additional patents will allow for the EAS Series to utilize both milling and 3D printing for the manufacture of custom dental implant components, making our system the only one to allow the flexibility of technique bridging both traditional and digital dental processes. As Scott Dunham, Vice President of Research for SmarTech stated, "Print technologies have already had a massive impact on the dental prosthetics market, but as demand for implant-supported restorations grows worldwide, it will be up to companies like Preferred Dental to bring the potential benefits of 3D printing to dental practitioners, and ultimately to patients."

As part of our commitment to bring these benefits to our digital processes and our continuing development of the technologies involved, PDTI identified a gap in supply chain and product tracking for regulatory and quality control. With this letter of intent, we are moving to solve this gap by working with Thorgrid Corp. in utilizing its recently announced 'Provenance X' solution. The platform is based off the Ripple XRP blockchain to provide transparent access to key product information and supply chain and manufacturing collation. PDTI. President, Mr. Erik Siegmund stated: "In today's economy and especially with products such as PDTI's digital EAS Series components, the ability of customers to connect with data in easy and transparent ways brings impact to a brand. I feel working with the developer of 'Provenance X' will open up new solutions for PDTI and look forward to us making this possible."

Provenance X's recent announcements have garnered positive attention within the blockchain community including industry influencers.
